

Product Description

KR-401N is a silicone oligomer product, and is a low molecular weight product with the same molecular structure as a silicone resin. KR-401N contains phenyl groups, which gives it superior compatibility with organic resins. When used as a resin modifier, KR-401N improves the flexibility, heat resistance, and weatherability of resins.

Product Features

- Low phenyl content
- Improves flexibility of resins products

Typical Applications

- Resins and coatings modification.

Typical Properties

Product type (taxonomy term)	Resins and Oligomers
Kind	Alkoxysilyl Oligomer
Active %	100
Kinetic Viscosity @ 25°C (cSt)	20.0
Specific Gravity @ 25°C	1.120
RI	1.432
Alkoxy Group Wt.%	33

Note: Values are not for specification purposes.

Warranty- The information and data contained herein are believed to be accurate and reliable; however it is the user's responsibility to determine suitability of use. Since Shin-Etsu Silicones, Inc. cannot know all of the uses to which its products may be put or the conditions of use, it makes no warranties concerning the fitness or suitability of its products for a particular use or purpose. You should thoroughly test any proposed use of our products and independently conclude satisfactory performance in your application. Likewise, if the manner in which our products are used requires governmental approval or clearance, you must obtain it. Shin-Etsu Silicones, Inc. warrants only that its products will meet its specifications. There is no warranty of merchantability of fitness of use, nor any other expressed or implied warranties. The user's exclusive remedy and Shin-Etsu Silicones, Inc.'s sole liability is limited to refund of the price or replacement of any product shown to be otherwise than as warranted.
